

The SKU Tab

Jennifer M - 2024-05-15 - ESP Updates

To manage the stock keeping unit (SKU) information for a product, click on the SKU tab.

The SKU, which stands for stock keeping unit, is a product identifier used to distinguish each variation of a product.

If the product has only one SKU number for all of its attributes (colors, sizes, etc.), add the SKU number in the Basic Details tab.

To add SKU information for multiple variations, meaning that a product has multiple attributes and each attribute has its own information, use the dropdowns to select one or two criteria to which the SKU is associated.

Product criteria *(select one or two)*

A screenshot of the 'Product criteria' section. It shows two dropdown menus, each with a 'Make a selection...' placeholder. A blue arrow points to the first dropdown. The first dropdown is open, showing a list of options: 'Make a selection...', 'Product Color', and 'Size'. A blue button labeled 'Show' is to the right of the dropdowns.

For example, if the product has a unique SKU number for each color in each size, use this dropdown to select size and product color. Then, click on the Show button.

Product criteria *(select one or two)*

A screenshot of the 'Product criteria' section. The first dropdown menu is set to 'Product Color' and the second is set to 'Size'. A blue arrow points to the 'Show' button, which is a blue button labeled 'Show'.

Each combination of available sizes in all product colors will be listed. Type or paste the SKU numbers for each size and color into the SKU box.

You are able to filter the results using the checkboxes on the right.
