ESP Presentations

Jennifer M - 2020-07-16 - Presentations and Projects

The ESP Presentation tool allows you to quickly and easily build sales presentations that are professional, customizable and shareable. Think of presentations as your tool for closing more sales. How you present a product can make a remarkable difference in your client's eyes.

Ready to get started?

Great! ASI is here to help you! What would you like to do?

Create a New Presentation

There are several ways to begin a presentation. Where are you starting from?

I'm a search results page

After marking a product, a toolbar will appear which will enable you to manage the product. Click on the Create Presentation option. If you need to create a presentation with products from multiple searches, save the products to the Clipboard first. To save products to the Clipboard from a product search, mark the products, hover on the Copy To option on the toolbar and select Clipboard.

I'm on the ESP Homepage

To create a presentation from the ESP Homepage, click on Presentations from the ESP Web toolbar and select Create a New Presentation.

I'm in the Clipboard

To create a presentation with items saved to the Clipboard, click on the Clipboard icon.

You can mark one item, check specific products, or check the top checkbox to select all. Once you have products selected, click on the Create Presentation option.

I'm in the Product Compare

From the Product Compare, mark the product(s) you would like to include in the presentation. Then, click on the Add button. You can use the Create New Presentation option to begin a presentation with the item(s) you selected.

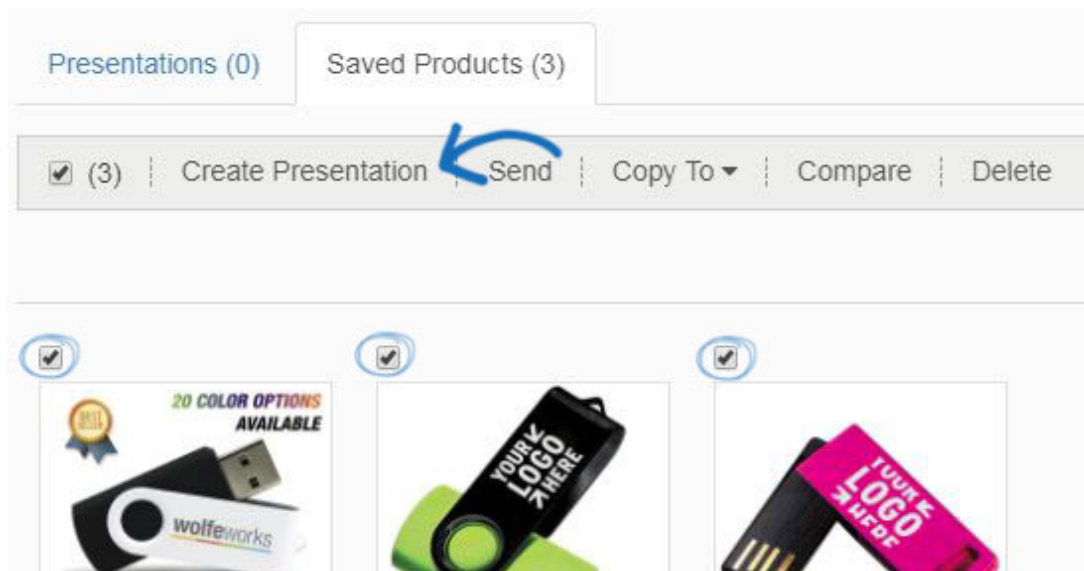

I saved the Products in a Project Folder

Click on the Projects option from the main toolbar.

Locate the project folder where the products have been saved. Then, click on the Saved Products tab. Mark the item(s) you would like to include in the presentation and then click on the Create Presentation option from the available toolbar.

I want to Create a New Version of an Existing Presentation

If you want to copy a presentation, you will need to do so in the Projects area. Click on the Projects option from the main toolbar.

Hover on a presentation listing to view management options: Download, Edit, Copy or Send. Click on Copy.

Before you can begin customizing the product information, you will need to name and assign the presentation. Type the Presentation Name, then assign it to a Customer and Project Folder. By designating a customer, a copy of the presentation (including products) will be saved in the CRM under that customer listing. In addition, select a Project Folder, which will act as an online filing cabinet for all your presentations.

Note: If you want to add this presentation to a new project or customer, click on the Create New link beneath Projects or New Customer to create them on the fly.

If you would like to share this presentation with other users within your company, use the Visible to options to select:

- Everyone: This presentation will be available for editing by all users within your company.

- Only the Record Creator: Only the user who created the presentation will be able to view and/or edit this presentation.
- Teams or Individuals: Select a sales team or designate specific individuals within your company with whom you would like to share this presentation.

After entering this information, click on the Create button.

A screenshot of the ESP (Enterprise Sales Platform) main toolbar. The toolbar is dark blue with white text. It includes the ESP logo on the left, followed by a dropdown menu labeled 'ESP'. To the right of the dropdown is 'ESP Websites Admin' with a small downward arrow. Below these are four main navigation buttons: 'Searches', 'Top Sellers', 'Projects', and 'Presentations'. The 'Projects' button is highlighted with a white mouse cursor icon pointing at it.

Hover on the the presentation you would like to modify and then click on the Edit link.

Add Products to a Presentation

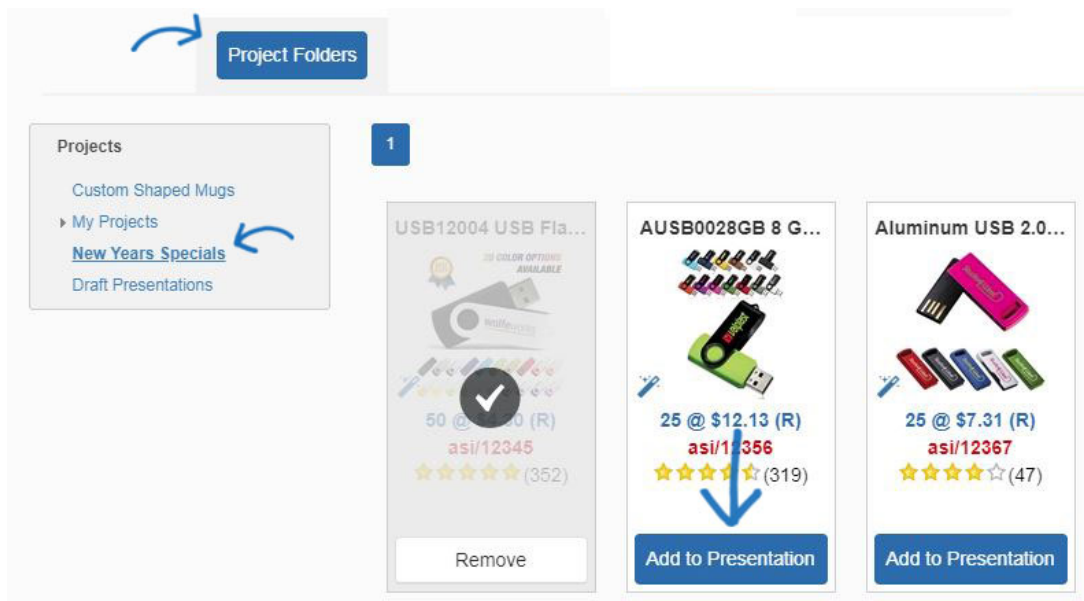

If you created a presentation, you can click on the Add Products option or use the dropdown arrow to add products. The only difference is that the dropdown arrow will bring you directly into the option you selected.

There are three ways to add new products:

From a Project Folder

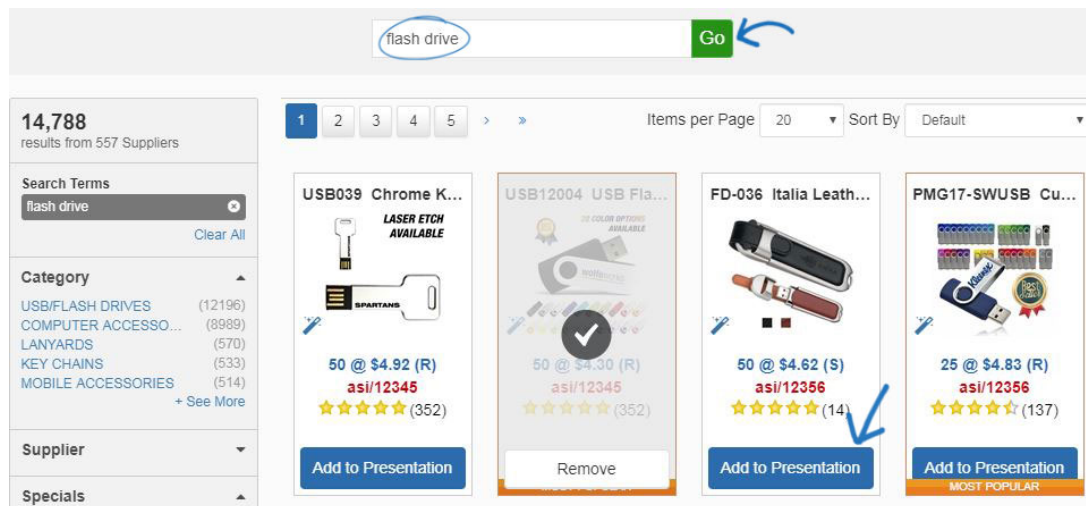

Click on the Projects folder option. All of the available project folders will be displayed below the folder icon. Select the project where the items you would like to include in the presentation have been saved. Then, click on the Add to Presentation button on the product listing.

From a Product Search

Click on the Projects folder option. Enter the search term(s) in the white box below the

magnifying glass icon. When you click into the box, a price range search will also be displayed. After entering your search keyword(s), click on the Go button. Use the guided navigation to narrow the results by clicking a link in any of the available fields. Use the Sort By dropdown to view the product results in a different order. After you have located the product(s) you would like to include, click on the Add to Presentation button on the product listing.

From the Clipboard

Click on the Clipboard option. All of the available items which have been saved onto the clipboard will be displayed. Click on the item(s) you would like to include in the presentation. After you have located the product(s) you would like to include, click on the Add to Presentation button on the product listing.

No matter where you added the products from (Project Folder, Search, or Clipboard), clicking on the Add to Presentation button product will update the product listing to show with a check mark and a remove button. A count of how many products are in the presentation will be displayed above the presentations toolbar.

When you are finished adding products, you can use the Edit Products, Price Calculator, Design, and Contact Info areas to customize your presentation.

Edit the Product Information

You are able to completely modify the product information for all items within a presentation by clicking on Edit Products.

A thumbnail for each product in the presentation will be displayed below the Edit Products options. The current product you are editing will show with a checkmark and all the product information for that item will be shown below. If the presentation contains a lot of items, you may need to use a horizontal scroll bar to view them all.

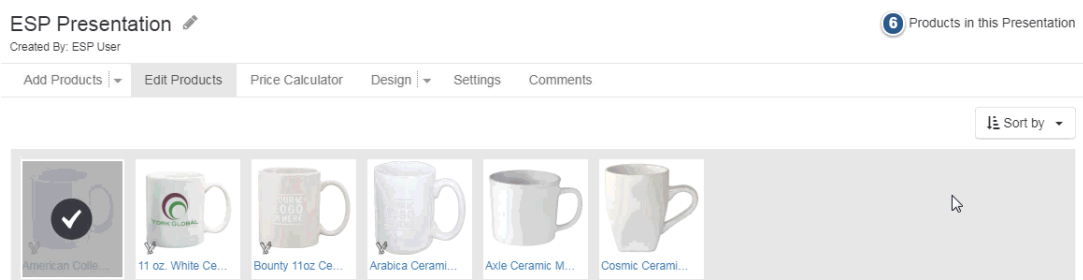

How would you like to modify the product information?

Change the order of the products

The order of the product thumbnails is the order of the products in the presentation. To change the order, drag and drop the thumbnails to the order you would like.

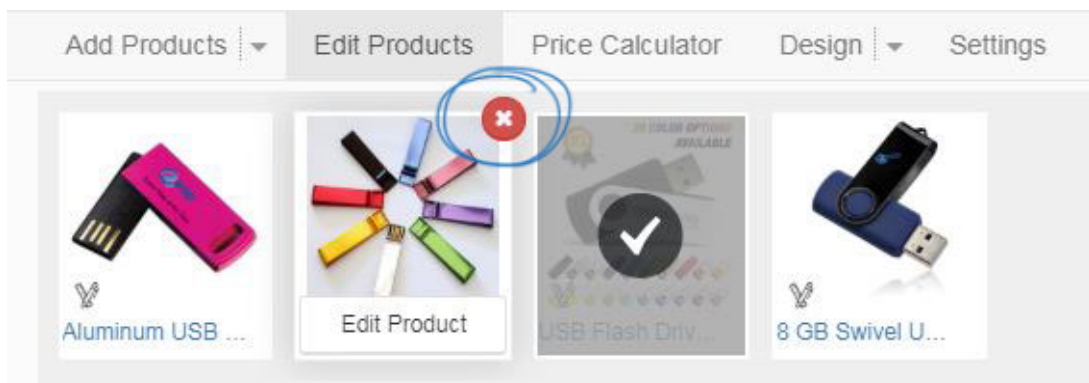

You can also use the Sort By dropdown to sort the products within the presentation.

Remove a product from the presentation

To remove a product from the presentation, hover on the thumbnail image. Then, click on the red circle with the white "X" icon.

Modify the information in a field

Hover on the product thumbnail to see the Edit Product button. Click on the Edit Product to open the item in an editable state.

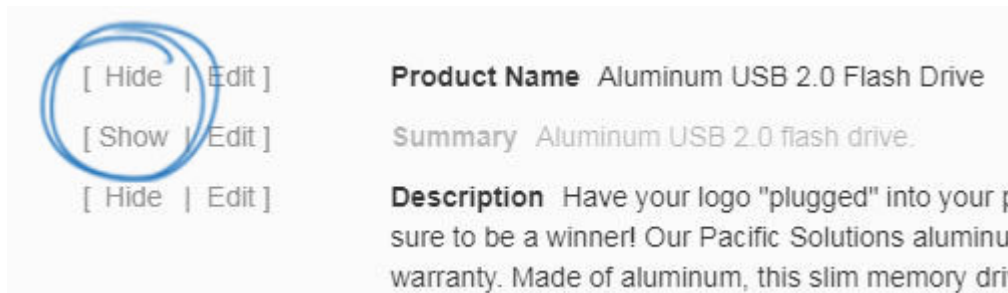

Then, click on the Edit link for the field where you would like update the information. Type the new information in the Edit Product Detail field. You are also able to update the field label for this product. If you would like to update the field label for all the products within the presentation, you can do so in the Layout & Fields section of the Design area.

Click on the Save button when you are finished updating the information.

Change which fields are visible

The Show/Hide links in this area will apply to the individual product only.

You are able to show or hide fields for all of the products in the presentation within the Design section. You are also able to save a template with specific visible or hidden fields by selecting the fields in the Design area and then clicking on the Save as Template option. For more information on how to do this, please review the Design section.

You can also hide price columns within an individual price grid using the checkbox above the price break.

Product Option: C Handle, D Handle **Size:** 12 oz

Hide	C Handle, D Handle, 12 oz										Edit
------	---------------------------	--	--	--	--	--	--	--	--	--	------

Show All Columns	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

 [Order](#)

Use a different product image

If the supplier has provided multiple images for the product, a thumbnail for each additional image will be displayed below the main product image. Use the arrow to scroll horizontally through available images.

The available options for image replacement will vary depending on the item, however, you can always upload an image from your computer to use in the presentation. Click on the Upload a New Product Image link, browse your computer, locate the image file and then click on Open.

If the supplier has enabled the image for virtual samples, hover over the image to make your selection:

- *Show Catalog Image*: Will display the default, standard image for the product from

the supplier's catalog

- *Show Blank Image*: Will clear any existing logo from the image and show as blank
- *Show Virtual Sample Image*: Will display the virtual sample logo image uploaded in the [Virtual Samples section of the Preferences](#) area.

After clicking on an option, a prompt will appear asking if you would like to replace the current image with your selection for all virtual sample enabled images within the presentation.

Show my customer's logo on the product

You will be able to display your customer's logo on all virtual sample enabled images. Virtual sampled enabled images will display with a wand icon.

When editing the product, you will see the Create a Virtual Sample button below the image. Click on that button to get started.

Note: If the image has the wand icon, but you do not see the Create a Virtual Sample button below the image, it may be because the main product image for the product is not virtual sample enabled. Scroll click on the thumbnail images to get to the virtual sample enabled one(s).

For more information on creating virtual samples, please review the [Virtual Samples in ESP](#) article.

Include Comments

At the bottom of the product listing, you have the option to enter comments about this product. Comments can be viewed by the end user and you have the option to enable end users to enter their own comments on the presentation.

Show Current Price | Update to Current Price Save Order

Comments Notes

Post

For more information on using comments, please review the Comments section.

Modify the Pricing

To modify the pricing for multiple products in a presentation, use the Price Calculator section. You also have the option to display the price grids in reverse (descending) order. This option is available in the Settings tab.

How would you like to adjust the pricing?

Use a Profit Margin

A profit margin is essentially the percentage of profit. To set the items to a profit margin, select the "Adjust Prices based on Profit Margin" option and enter a numeric value in the percentage box. Do not include the percentage symbol (%). Click on the Apply button to make your changes apply to all or selected products.

Updates will be applied to ☒ All Prices ☐ Selected Prices Only [Manage Currency](#)

☒ Adjust Prices based on % Profit Margin

OR

☐ Add ☐ Fixed Amount \$ ☐ To ☐ Price ☐ From ☐ Price

☐ Subtract ☐ Percentage % ☐ Net Cost ☐ Net Cost

☐ Round up to 2 decimal places

Add or Subtract a Fixed Amount or Percentage

You can add or subtract - a percentage or a fixed amount - to or from the list price or the net cost. Select the boxes for the action you would like to take and enter a numeric value in the Fixed Amount or Percentage area. You can also choose to have the prices round up to two decimal places instead of three. When you are finished, click on the Apply button to make your changes apply to all or selected products.

Updates will be applied to ☒ All Prices ☐ Selected Prices Only [Manage Currency](#)

☐ Adjust Prices based on % Profit Margin

OR

☐ Add ☐ Fixed Amount \$ ☐ To ☒ Price ☐ From ☒ Price

☒ Subtract ☒ Percentage % ☐ Net Cost ☐ Net Cost

☐ Round up to 2 decimal places

I'm not sure. How is using a profit margin different than adding a percentage?

If you're not sure whether to use a profit margin or add a percentage markup, it can be a little confusing. Essentially, the profit margin is percentage of profit, whereas a markup is how much of a percentage should be added to the list price.

So, how do profit margin and percentage markups differ in terms of determining the list prices for the item(s)? In general, here is the difference:

- **Profit Margin:**

$$\text{Net Cost} / (1.00 - \text{Profit Margin}) = \text{New List Price}$$

- **Percentage Markup:**

List Price from supplier * Percentage = Amount to be Added to Current

List Price

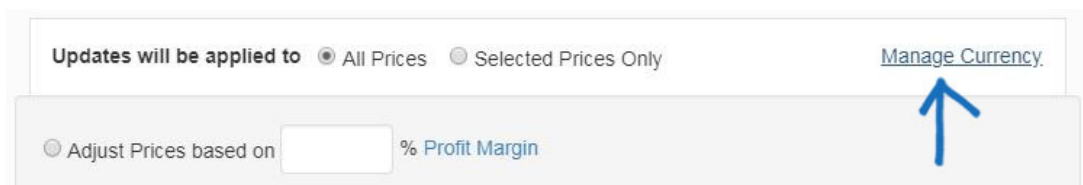

List Price from supplier + Amount to be Added to Current List Price =

New List Price

For more information, please review the [Profit Margin versus Percentage Increase Reference Guide](#).

Convert the Currency

Pricing for all products in a presentation can be converted from US dollars (USD) to Canadian dollars (CAD) and vice versa. To convert pricing, click on the Manage Currency link.

Updates will be applied to ☒ All Prices ☐ Selected Prices Only [Manage Currency](#)

☐ Adjust Prices based on % Profit Margin

A blue arrow points to the [Manage Currency](#) link.

Use the dropdown to select which currency should be displayed on the presentation. Then, use the conversion box to enter the exchange rate. Then, click on the Save button.

Manage Currency [X]

Show Prices In:

Canadian Dollar (CAD) [v]

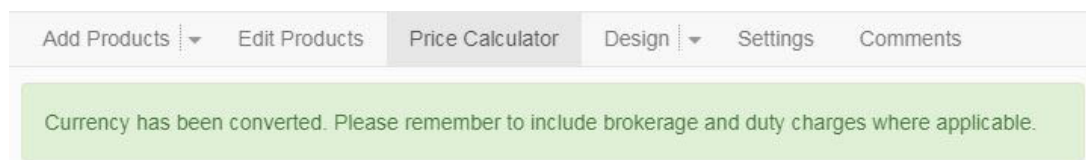

Use an exchange rate of

1 US Dollar (USD) To 1.3100 Canadian Dollar (CAD)

Cancel Save

A blue arrow points to the 'Show Prices In:' dropdown, and another blue arrow points to the 'Save' button.

You will see a notification that the pricing has been updated in the presentation.

Add Products [v] Edit Products Price Calculator Design [v] Settings Comments

Currency has been converted. Please remember to include brokerage and duty charges where applicable.

I just want to edit the pricing for one product

To update the quantities and pricing for a product, locate the price grid for that item. Use the individual boxes for quantities, list prices, and net cost. Type the new quantities and pricing you would like to use and then click on the Save button. If you wanted to reset the products to the supplier's list price, click on the Update All Products to Current ESP Price link.

Configure the Header

In the Header layout, you can incorporate your logo into the header of the presentation by clicking on the use the Select from Image Library to choose a logo from the Media Manager or upload a new image. You can use the Layout dropdown to select how you would like your logo and contact information to be displayed.

Header Layout

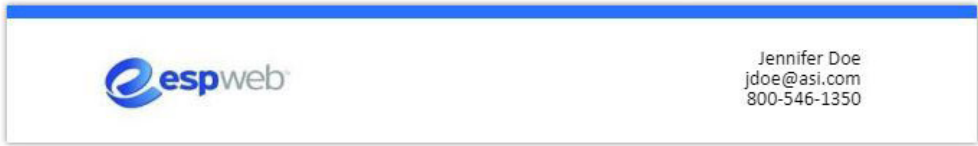

Layout

Logo Left, Contact Right

Preview

Select from Image Library

Remove Logo

Note: To change the contact information on the header, go to the Settings section.

Configure the Footer

In the Footer layout section, you can incorporate your logo into the footer of the presentation. Use the Select from Image Library to choose a logo from the Media Manager or upload a new image. You can use the Layout dropdown to select how you would like the footer to be displayed. Use the Edit Content button to customize the footer to display text such as your web address. Check the Show page numbers box to add page numbers to your presentation.

In the **Layouts & Fields** section, you are able to:

Choose How Many Products per Page

Hover on the arrows to the left and right of the product layout thumbnails to scroll through the available options:

- 1 product per page with a large image
- 1 product per page with more details
- 2 products per page
- 3 products per page
- 4 products per page
- 6 products per page
- 12 products per page

The data fields that are the standard for each template are denoted with the eye icon in the Product Fields section below.

Manage Product Fields

You are able to select which fields are displayed on the presentation using the Visible checkbox. The standard fields for each template will automatically be marked and denoted by the eye icon to the far right. You are able to uncheck the visible checkbox to not display a field for any products in the presentation. When determining the amount of fields to display, be mindful of the amount of standard fields for the template because adding more than the default number of fields may cause formatting issues. For example, if you are working with the 12 products per page layout, there is only space for a few fields. However, if you are working with the one product per page layout, you can show much more information for each item.

Here is the number of default fields for each layout:

- 1 product per page: Image, Price Grid with Price Includes Statement and 12

additional fields

- 1 large product per page: Image, Price Grid with Price Includes Statement and 7 additional fields
- 2 products per page: Image, Price Grid with Price Includes Statement and 7 additional fields
- 3 products per page: Image, Price Grid with Price Includes Statement and 7 additional fields
- 4 products per page: Image, Price Grid with Price Includes Statement and 7 additional fields
- 6 products per page: Image, Price Grid and 3 additional fields
- 12 products per page: Image, Price Grid and 3 additional fields

Each product field within a layout will be displayed with a customize label name box. Click into the box and type the new field label. If you would like to save these labels and layout for future presentations, use the Save as Template link.

You can also change the order of the Product Fields by clicking on the three vertical dots to the left of the order number, then dragging and dropping the field to a new location. The numbers will change automatically to reflect the new order of the product fields.

In the example below, the Description is made visible, while the Summary is hidden. Then, the Description is moved to the top spot and the Product Number is relocated to the third spot before being renamed to "Reference Number".

Product Fields

Order	Visible	Field Label	Customize Label Name
1	<input checked="" type="checkbox"/>	Product Name	<input type="text" value="Product Name"/> 
2	<input checked="" type="checkbox"/>	Summary	<input type="text" value="Summary"/> 
3	<input type="checkbox"/>	Description	<input type="text" value="Description"/>
4	<input type="checkbox"/>	Tradename	<input type="text" value="Tradename"/>
5	<input checked="" type="checkbox"/>	Material	<input type="text" value="Material"/> 
6	<input type="checkbox"/>	Shape	<input type="text" value="Shape"/>
7	<input type="checkbox"/>	Product Number	<input type="text" value="Product Number"/>
